DRAGON KINGDOM / FOR GROWN-UPS

A small update for your Wall Dragon

26 October 2026 - please keep this sheet with your setup card.

If your dragon shows an **HTTPS error** when checking for updates, there is a repair. Touch play and local phone controls still work. **Do not factory-reset it.**

Two ways to update over Wi-Fi

1. Keep the dragon on its normal bottom USB-C supply. Scan UPDATE below and download Dragon Kingdom Updater for Windows or Mac.

2. Home Wi-Fi: Put computer and dragon on the same home network. Choose **Home Wi-Fi**, then **Check for updates** and **Find dragons**.

Or direct to dragon: For lamps **not on home Wi-Fi**, choose **Dragon setup Wi-Fi (offline)**, then **Find dragon Wi-Fi** while still on internet. The app downloads first and scans. Select yours and **Connect to selected dragon**; it switches Wi-Fi for you. Allow OS Wi-Fi/location permission if asked.

3. Select the lamp, enter parent password **dragon123** and choose **Update selected dragon**. Keep power and the app connected. It tries to reconnect, verify settings and return to your original Wi-Fi.

No laptop USB or opening the box. If a lamp joins home Wi-Fi, its AP closes after 15 seconds; use Home Wi-Fi mode. The guide includes manual-connection and phone-only alternatives.

dragon-kingdom/setup/

OPEN YOUR DRAGON

http://192.168.4.1/
Join dragon Wi-Fi first

Need to set up Wi-Fi again?

Power the dragon on. On your phone, join **Dragon-Kingdom-XXXXXX** (your dragon has its own six letters/numbers). Wi-Fi password: **dragon123**. Stay connected if warned there is no internet. Open **http://192.168.4.1/**.

Unlock Parent settings with **dragon123**, then teach it your **2.4 GHz home Wi-Fi**. Rejoin home Wi-Fi and open the saved dragon address. The SETUP link repeats the full instructions and user manual.

Cannot find the lamp? Avoid guest/isolated networks; use Add address from its webpage. If you need help, contact the person who supplied your dragon.
